

# A New Solution for Plant Floor Displays

**Parker Factory Display brings innovative capabilities to automation.**

Offering unprecedented flexibility and impact for delivering critical messages to associates on the factory floor, the new Parker Factory Display (PFD) visualization system empowers workers with real-time, situational awareness for faster response to downs and non-conforming conditions. Whether presenting Andon display-type information, lean metrics, production status, OEE data, safety policies or employee announcements, PFD is much more than a “scoreboard” that simply displays text.

With its high-definition resolution, flat-panel displays and built-in networking, PFD offers unparalleled

visual impact for empowering associates. Its intuitive graphics enhance the message, while its distributed architecture easily integrates into existing manufacturing and IS infrastructure. Whether remotely publishing displays via the Web or visualizing non-conforming parts on a production line, Parker Factory Display presents factory floor information anywhere that it's required and does so much more than other production board displays and Andon systems . . . all at a lower cost.

PFD comes with pre-installed software that fully leverages the wide availability of Web-browsing software for remote support and application sharing on the Internet and IP networks. PFD also comes with Parker Factory Manager, a Windows-based software that allows users to develop, edit and publish PFD application from any PC. This browser-based tool enables remote publishing from any location on a network or anywhere in the world with an Internet connection.

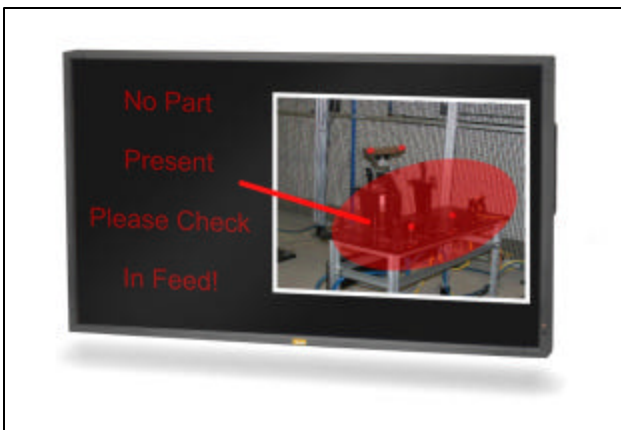

Parker Factory Display supports a wide variety of innovative features that will bring new capabilities to plant floor display applications, including an HMI-inspired development

environment, Web-published displays and development, data integration with InteractX SCADA and reduced overall costs.

Additional product features include:

- 32", 40" and 46" widescreen sizes with 16.7 million colors
- Priced competitively with less-capable LED display products
- Direct PLC connectivity automates data collection – no charge for more than 40 drivers
- Multiple display systems can be served from a single master PFD unit
- Continuous improvement database can be distributed/aggregated across multiple locations via the Internet
- Templates allow corporate standard metrics to be deployed company wide
- Sophisticated security allows 6 different access levels including "view only"
- Intuitive development tools, allowing easy screen customization and configuration
- Thermal sensors and fans on all models with scheduling feature for power
- VESA 300mm mounting
