

InteractX Gets an Update

Award-winning software now supports 32-bit and 64-bit development.

Parker Hannifin is pleased to announce the release of the latest update to our popular InteractX supervisory HMI software: InteractX version 4.0. The biggest improvement with version 4.0 is that InteractX now supports Windows 7 32-bit and 64-bit for development, and Windows 7 32-bit systems for runtime. Other major enhancements include browser tools for Xpress and PFD, a HASP support key and, for the first time, the CrypKey software licensing has been removed.

Not only does version 4.0 offer the industry's most powerful historical trending features, but these features are the easiest to use. Just point and click and you are logging!

InteractX version 4.0 also includes a "Quick Log" feature that allows users to log any critical data with the click of a selection box.

For full details on the features and fixes included in InteractX Version 4.0, please see our "What's New in InteractX Version 4.0" document posted on the product page.

InteractX version 4.0 development is available for immediate download from the Extranet product page, and InteractX version 4.0 runtime will begin shipping pre-installed on EPX, HPX and IPX model PowerStations very soon.
